- Seizures (in advanced cases)

Prevention:

- Vaccination: Regular vaccinations are essential to prevent this disease.

3. Kennel Cough

Kennel cough, or infectious tracheobronchitis, is a highly contagious respiratory disease. It is often seen in places where dogs are in close quarters, such as kennels, dog parks, or grooming facilities.

Symptoms:

- A persistent dry cough
- Sneezing
- Nasal discharge
- Mild fever

Prevention:

- Vaccination: Administer the kennel cough vaccine, especially if your dog frequently interacts with other dogs.

Common Health Problems in Dogs

In addition to viral infections, dogs can suffer from various health problems that can impact their overall well-being.

- Shortness of breath

Prevention:

- Maintain a balanced diet: Consult your veterinarian for proper portion sizes.
