The Nature of Stress

Stress can be classified into two main types:

1. **Acute Stress:** This is a short-term stress response that can be beneficial, as it helps individuals meet specific challenges. Examples include the stress experienced before a big presentation or exam.

2. **Chronic Stress:** This type of stress persists over a longer period and can lead to serious health issues if not managed effectively. Examples include ongoing work-related stress or prolonged financial difficulties.

thoughts and feelings without judgment.

Behavioral Approaches

- Social Support: Building a strong social network provides emotional support and helps individuals cope with stress. Engaging with friends, family, or support groups can offer relief and perspective.

Physical Approaches

Physical strategies target the physiological aspects of stress. Techniques include:

- Regular Exercise: Engaging in physical activity releases endorphins, which are natural stress relievers. It is recommended that individuals incorporate at least 30 minutes of moderate exercise into their daily routines.
